**open studies**

	<b>name of study</b>	<b>target group/ short description</b>
<b>breast cancer</b>	CAMBRIA-2 study EKIB study	An adjuvant endocrine-based therapy study of camizestrant (AZD9833) in ER+/HER2-early breast cancer (CAMBRIA-2). Analysis of human breast tumor heterogeneity and immune cell infiltrates and their relevance for patient outcome by mass cytometry.
	EXPERT- study (ANZ 1601/ BIG 16-02) MELODY-study PROMs TAXIS-study (SAKK 23/16) TroFuse-010 study  VISION-study (SAKK 23/18)	Clinical trial which presents a unique opportunity to improve personalised use of radiation therapy in patients with early breast cancer according to their individual risks of local recurrence (molecular luminal A-breast cancer). A prospective, non-interventional, multicenter cohort study to investigate various imaging-guided techniques for the localization of malignant breast lesions. Patient reported outcomes after oncoplastic breast conserving surgery. Tailored <b>AXillary</b> Surgery with or without axillary lymph node dissection followed by radiotherapy in patients with clinically node-positive breast cancer (TAXIS). A study of Sacituzumab Tirumotecan as a single agent and in combination with Pembrolizumab versus treatment of physician's choice in participants with HR+/HER2- unresectable locally advanced or metastatic breast cancer. Vacuum assisted biopsy immediately before surgery as an intra- or pre-operative surrogate for patient response to neoadjuvant chemotherapy for breast cancer (VISION I).
<b>urogenital tumors</b>	PCO study (Prostate Cancer Outcome) MRI bladdercancer study SAKK 08/23 study	Patient reported outcome measurement of patients with prostate cancer with global uniform patient questionnaire. Multiparametric Magnetic Resonance Imaging (MRI) to improve bladder cancer staging and treatment decision-making. Addition of Darolutamide to first line treatment of mCRPC: a randomized open label phase II trial".
<b>gastrointestinal tumors</b>	BERING CRC study EDIUM study	Encorafenib and Cetuximab in patients with metastasized BRAFV600E mutated colorectal cancer: a multi-centric, multi-national, prospective, longitudinal, non-interventional study. Patient-reported outcome study for colon cancer patients: <b>Ergebnisqualität bei Darmkrebs: Identifikation von Unterschieden und Massnahmen zur flächendeckenden Qualitätsentwicklung</b> (Quality of Experience in the case of colon cancer: identification of differences and actions to be taken for a comprehensive quality development)
	DANTE Study  ESODATA study GUIDE.MRD-01-MRC study PREFER-study Quality assurance study for duodenal tumors Quality assurance study for pancreatic tumors ROBOT-2 study Tiger study	A randomized, open-label phase II/III study on the efficacy and safety of Atezolizumab in combination with FLOT versus FLOT alone in patients with gastric cancer and adenocarcinoma of the gastroesophageal junction with high immune reactivity. International standardized online database für outcomes of the patients receiving evaluation and/ or treatment für esoohalgal diseases of benign and malignant conditions. Evaluation of ctDNA for the detection of minimal residual disease (MRD) after curative resection of colorectal cancer (CRC). Endoscopic management of patients with T1bN0M0 esophageal adenocarcinoma. Quality assurance study of perioperative morbidity and post-surgical follow up of hepato-duodeno-pancreatic surgery. Quality assurance study of perioperative morbidity and post-surgical follow up of pancreatic surgery. Robot-assisted minimally invasive thoraco-laparoscopic esophagectomy versus minimally invasive esophagectomy for resectable esophageal adenocarcinoma, a randomized controlled trial. Distribution of lymph node metastases in esophageal carcinoma.
<b>hematological systemic diseases</b>	Abbvie Valor-Studie EBMT-Register PASS study SAKK 38/23 Liberty study SAKK EMCL-Registry Treg-cell study	A study to assess change in disease state in adult participants with acute myeloid leukemia (AML) ineligible for intensive chemotherapy in Switzerland and Austria receiving oral Venetoclax tablets (VALOR).
		Registry for patients that received a haematopoietic stem cell transplantation or CAR T-cell therapy. Observational study including patients treated with CAR-T therapy to assess treatment outcomes and associated complications. Liquid Biopsy to diagnose and monitor CNS involvement in High-risk B Cell Non-Hodgkin Lymphoma. The registry of the European Mantle Cell Lymphoma study group - MCL: Disease pattern, treatment algorithms and mechanisms of relapse. Regulatory T-cells as tumor-promoting cellular partners and potential therapeutic targets in diffuse large B-cell lymphoma.
<b>neuro-oncological tumors</b>	LGG Studie Sinonasale QoL Studie	Prospective observational study on guideline-based therapy in astrocytomas and oligodendrogliomas, WHO grade 2, with IDH1/2 mutation. Prospective observational study to evaluate the nasal quality of life after endoscopic transnasal surgeries.
<b>multi-organ studies</b>	AGE-1 Studie Roche GLYCART Studie	Evaluation of forensic methods for age estimation of patient with cancer and a cotrol group. Ex vivo modeling of fresh tumor tissue.
